DETAILED ACTION***Election/Restrictions***

1. Claims 1-32 are generic to a plurality of patentably distinct species defining the continuous production method of a polyamide inclusive of i) methods that require use of a self-cleaning horizontal twin-screw reaction apparatus and ii) methods that do not require use of said self-cleaning horizontal twin-screw reaction apparatus. The election of an ultimate species of continuous production method specifically defining the operations performed in the final polymerization step is requested. It should be noted that election of the method embodiment wherein a self-cleaning horizontal twin-screw reaction apparatus is used would require that the specific operations performed therein, e.g., purging of inert gas, vacuating, adding an adjusting agent, etc., be set forth. The species are independent or distinct because the search fields for the various process embodiments are not co-extensive. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed. Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).
